- Contributed 77% impact to the company's growth through peer programming and collaborative work.

PROJECTS

MyOrbit- Software Development/full-stack, Co-founder, Developer

[| View Website](#)

PROJECT OVERVIEW

MyOrbit is an all-in-one tool for students and young professionals to stay organized and on top of their busy lives. The app provides features such as expense tracking, task management, note-taking, shopping lists, work/study schedules, and personal goals management. With an intuitive design, MyOrbit helps users keep their finances, tasks, and schedules in order, enhancing productivity and reducing stress.

KEY FEATURES

- **Expense Tracking:** Manage and categorize spending, set budgets, and track progress.
- **Task Management:** Organize to-do lists and set reminders to stay on top of tasks.
- **Personal Goals & Schedules:** Track and work towards personal goals, study/work schedules, and shopping lists.
- **User-Friendly Design:** A simple and intuitive interface for quick access to all features.

TECHNOLOGIES USED

Frontend: React, Vite, React Router, Frame Motion, React Icons

Backend: Firebase for authentication and database

Payment Integration: Stripe for payments

Analytics: Vercel Analytics for tracking performance

Others: Axios for API requests, EmailJS for email functionality, Chart.js for visual data representation

IMPACT

Gained 100+ active users, with positive feedback on ease of use and task management features, including my instructors.

Improved financial awareness for users by categorizing their expenses and setting up budgets.

Enhanced productivity for students and young professionals by providing an all-in-one tool for managing tasks and goals.

Deluxe Import N Export LLC(Freelancing) - Software Development, Design, Programming

[| View Website](#)

- **Frontend:** Utilized React, React Router DOM, and React Spring for animations.
- **Backend:** Implemented Firebase Authentication and database management.
- **API Integration:** used a third-party API to fetch and display car data and also EMAILJS for email notifications.

Expense Tracker(Mobile App) - Software Development, Design, Programming

GitHub | [View Project](#)

- **Frontend:** Built a mobile expense tracking app using React native and Redux for data persistence.
- **Backend:** Integrated Firebase for user Authentication and Firestore for data storage plus firebase ML kit.
- **Libraries:** Integrated expo for mobile development.
